New Features in Vault V10 API (9.5.2 Release)

Release Date: August 8, 2014

We are pleased to bring you the following enhancements to the V10 API in this week's release.

Updates to Groups API

The *groups* object field now includes *name__v,* which is a unique value used to identify the group in the API. The *groups* object field *group_name__v* is now *label__v.* The *label* field will contain a user-friendly string (e.g., Document Users, External Users, etc.).

Updates to Documents API

The *documents* object fields *document_last_modified_by__v* and *document_modified_date__v* are no longer available as of API v10. Use the object fields *last_modified_by__v* and *version_modified_date__v* instead.

Updates to VQL

The format of VQL (Vault Query Language) responses has been updated to simplify the integration with standard JSON/XML libraries and prepare for the upcoming support for VQL JOINs.

💬 Feedback

API Bug Fixes

Issue	Description
39066	Fixes a pagination issue in Vault Objects collection API.
39021	Fixes the error message produced during document create or update when the picklist value specified for a picklist field is invalid.
